

Postscript Document (*.ps) Viewer

The documentation for the GERB project at RMIB is mainly available as postscript files. This page aims to help you to install a viewer for these files.

You have to install successively Ghostscript and GSview (or GV for UNIX). Both are available from the web site:

- <http://www.cs.wisc.edu/~ghost/>

For Windows users, first install AFPL Ghostscript 7.00 for Win32 using the self-extracting file

- [gs700w32.exe](#) (6119936 bytes)

then install GSview 4.0 for Win32 using the self-extracting file

- [gsv40w32.exe](#) (1491456 bytes)
